

ITS INTEGRATOR OVERVIEW

A step ahead and top of its class.

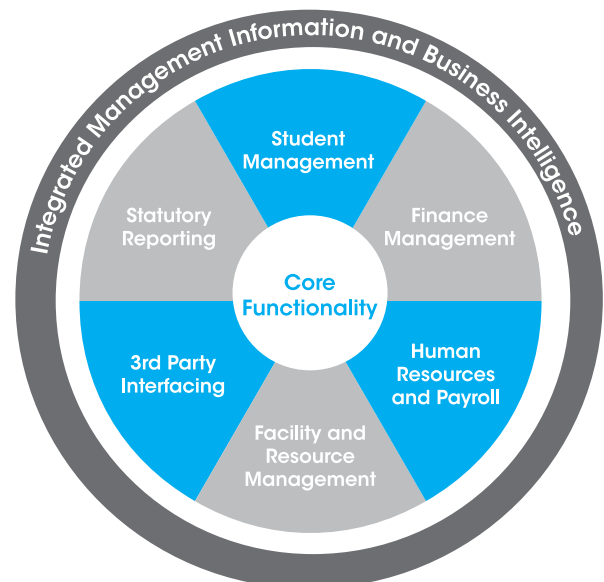

You're in the business of education. Your customers are your students, your personnel and external stakeholders. The products you supply are courses and programmes. Your business processes focus not only on registration, timetabling, examinations and graduations, but also on financial and human resource management. Running a world-class operation includes research, scholarships, student support and alumni.

Adapt IT's Education division, based in Pretoria has a rich history spanning more than 29 years as a global provider of comprehensive administrative ERP solutions for higher and technical and vocational education and training institutions. We pride ourselves on a culture that is based on strong, longstanding client relationships, and our personnel's passion for service excellence.

Our ITS Integrator product suite, which is suitable for small, medium and large institutions, provides comprehensive functionality to enable back-office and front-office operations, as well as self-service functions for students and personnel alike, including:

- Student Management
- Finance Management
- Human Resources and Payroll
- Management Information and Business Intelligence
- Facilities Management

ITS INTEGRATOR ERP

The ITS Integrator product development roadmap demonstrates our understanding of the highly dynamic and frequently changing educational landscape. We have a strong commitment to ongoing, client-influenced development and improvement of the product suite.

In a recent Gartner review of ITS it was noted that:

"For higher education institutions, we analyse the suites of administrative core applications that support integrated strategies for HR, Financials and Student information systems..."

ITS provides a lower-cost alternative for institutions considering an integrated solution... The product road map for modernisation continues to be developed, and customers value the changes being made".

A best of breed implementation approach can be followed and clients only need license those functional components that are required by the institution.

ITS INTEGRATOR BENEFITS

- Fully integrated, yet modular.
- Implementation and Support services.
- Self-Service applications for students and personnel.
- Mobile Apps for students.
- 24 x 7 system availability from anywhere.
- 3rd Party System integration.
- Portal deployment with Single Sign-on functionality.
- Dashboards with graphs and charts in all functional areas.
- Logging of data for audit purposes.
- Notes facility throughout the system.
- On-line Help and User Manuals are available from each screen and the Help menu.
- Data export and import available in selected options.
- Detail and summary reports are available in all system modules.
- The Metadata layer assists with MIS and ad hoc report generating.

TECHNOLOGY

ORACLE™ as a relational database management system is used as underlying technology for the ITS Integrator product suite. ORACLE runs under a number of operating systems. We prefer the "Open Systems" approach and the system runs under the UNIX operating system (HP-UX, Dec-Unix, Solaris, SCO Open Server, AIX, LINUX, etc.) at our clients.

CLOUD COMPUTING AND HOSTING

Cloud computing (in this case SAAS – Software as a Service) means that the service provider makes a server available to the client with all the necessary software loaded. This includes the operating system, database, application (ITS Integrator), connectivity, firewall and backup services. This server is then accessible to the client over the Internet to perform data capturing and reporting activities. Adapt IT provides this service to the education sector. The server and software licences remain the property of the service provider. The client however is the owner of all the data that resides on the server.

Advantages of a cloud/hosting environment:

- Cloud computing enables the institution to focus on its core business and to outsource most of the ICT function.
- No capital outlay up-front to purchase a server or software licences.
- No server room on-campus to house the server.
- No need to provide expensive ICT skills on-campus.
- No installation or maintenance of server software on-campus.
- Reduced technical personnel training costs.
- General system training costs are reduced by providing transactional training only to end-user.
